At Gentera Center for Precision Medicine our weight loss success is driven by our high-quality peptide therapies and the commitment from our medical staff. Our packages include personalized consults with world-renowned physician, Dr. Juan Remos. Our Nutritionist Angela Lee will prepare a personalized nutrition and exercise plan for your 5-week journey. You will have the entire Gentera team rooting for your weight loss success!

Semaglutide - The Weight Loss Shot

Semaglutide is an FDA-approved injectable that targets weight loss. It improves body composition by reducing excess body fat, including abdominal fat, and increasing the proportion of lean body mass.

Semaglutide works by mimicking a hormone called glucagon-like peptide-1 (GLP-1) that targets areas of the brain that regulate appetite and food intake.

Semaglutide should be used in combination with lifestyle changes, including a healthy diet and exercise.

Side Effects: May include nausea, diarrhea, and vomiting.

Semaglutide should not be used in patients with a personal or family history of medullary thyroid carcinoma or in patients with a rare condition called Multiple Endocrine Neoplasia syndrome type 2 (MEN 2).

Tirzepatide - Super Boost Weight Loss Shot

Tirzepatide lowers blood glucose levels, increases insulin sensitivity, boosts feelings of satiety, and accelerates weight loss. Tirzepatide was developed to fight type 2 diabetes, but has additionally been shown to protect the cardiovascular system and act as a potent weight loss agent.

Side effects: Stomach pains. Also, note that a barrier method of contraception should be used for 4 weeks following the start of Tirzepatide and for 4 weeks after every dose escalation if they use oral contraceptives as this may interact and render the oral contraception not effective.

CJC 1295- Ipamorelin

Ipamorelin and CJC 1295 are often used together to stimulate muscle development. The combination works by increasing the blood level of hormones associated with growth. It can increase muscle mass and strength, decrease body fat, improve injury recovery time, and even improve sleep quality and cognitive function.

Side Effects: Reactions at the injection site, such as pain, redness or swelling along with flushing of the face; and less than 1 percent of patients report dizziness, headache or hyperactivity.

MOTS-c

MOTS-c is a peptide that acts as a superbooster to your metabolism and increases your ability to exercise, build muscle and lose weight. This peptide helps regulate mitochondrial energy to optimize your metabolic balance. Together with a nutritional plan, MOTS-C can help accelerate your weight loss.

Side Effects: Redness or swelling at the injection site.

Genera: We are your cellular anti-aging experts

How you feel and how you function is regulated by your cells and the proteins and chemicals that control their activities. During the last two decades, researchers have learned a great deal about how human cells function, and about how to change and improve those functions. Our personalized therapies and treatments will help you:

- Improve and maintain your quality of life
- Increase mental acuity
- Have more mental and physical energy
- Treat pain
- Heal and prevent injuries
- Manage your weight
- Look better from the inside out, with anti-aging therapies that can work on a cellular level
- Increase libido and enjoy better sexual health and wellness
- Treat chronic conditions, including anxiety and depression
- Prevent disease
